

MEET BOB

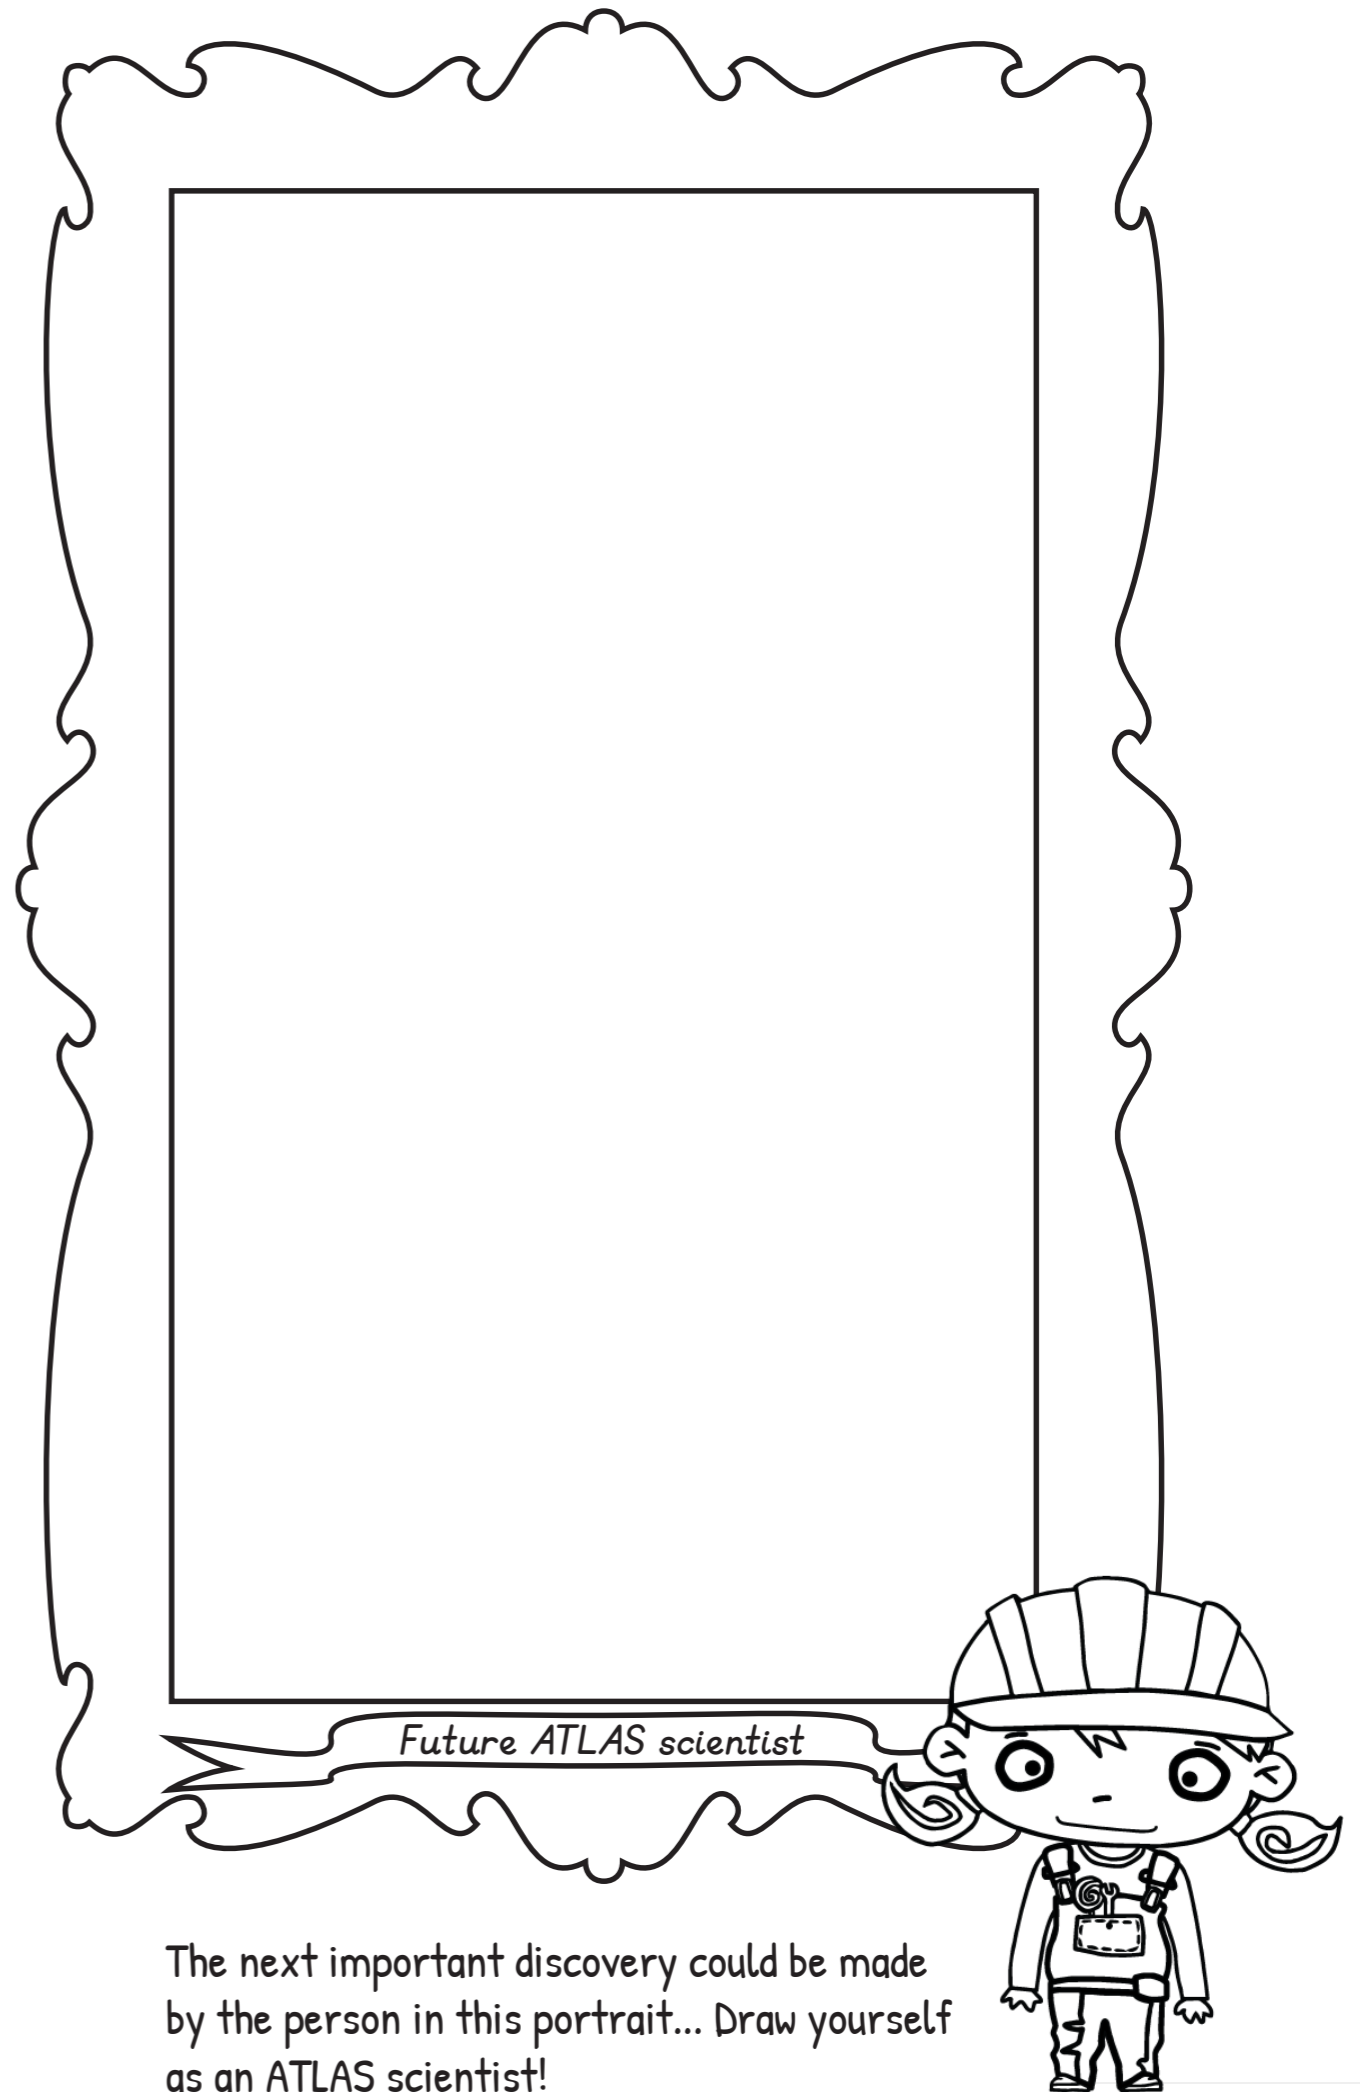

I am a Physicist with the ATLAS Experiment. My job is to look for answers to important questions. For example: What are we made of? What happened at the beginning of the Universe?

MEET BETTY

I am an Engineer with the ATLAS Experiment. My job is to build particle detectors.

ATLAS is like a giant microscope that looks for particles, the tiniest components of matter. Look around - matter makes up everything, even you!

The next important discovery could be made by the person in this portrait... Draw yourself as an ATLAS scientist!
