

Postdoctoral Research Fellows

The Tsinghua (Beijing) ATLAS group is looking for postdoctoral research fellows to work on the ATLAS experiment of LHC. Our group's research activity includes the SM Higgs, BSM and SM searches, and we are contributing to the ATLAS Phase-II silicon strip detector upgrades in collaboration with IHEP Beijing. The candidate is expected to work on a topic of common interest (hardware or data analysis) to the group.

Candidates with previous detector and data analysis experiences are encouraged to apply. The successful candidates should have (or about to have soon) a degree in HEP with an excellent research record. The salary is commensurate with experience and competitive. Interested candidates should send a curriculum vitae with research experiences, and provide three reference names and their contacts to xin.chen@cern.ch. The review will begin as soon as the application is received, and the position will remain open until filled. Candidates from all countries are encouraged to apply. Tsinghua is a top-ranked university in China. The candidates are encouraged to apply for several prestigious fellowships offered by the Department of Physics, the University or IHEP.
