

Postdoctoral Positions in Experimental Particle, Astroparticle and Nuclear Physics at IFIC (CSIC/University of Valencia).

The Instituto de Física Corpuscular (IFIC), a joint research institute of the Spanish Research Council (CSIC) and the University of Valencia, invites applications for two 2-years POST-DOCTORAL POSITIONS IN EXPERIMENTAL PARTICLE, ASTROPARTICLES AND NUCLEAR PHYSICS with starting date early 2026.

IFIC hosts internationally recognized experimental groups actively involved in major international collaborations across the frontiers of fundamental physics and its technological applications. Our teams contribute to world-leading experiments and R&D initiatives in:

1. High-Energy Physics at the LHC
2. Astroparticle and Neutrino Physics
3. Experimental Nuclear Physics
4. Development of Advanced Particle Detectors
5. Scientific Computing and Data Analysis
6. Societal and Technological Applications

Researchers at IFIC benefit from a dynamic and collaborative environment, modern facilities, and strong connections with global experimental programs and interdisciplinary applications.

Further information about IFIC members and their research activities can be found on our website: <https://ific.uv.es>

Candidate profile:

Applicants should have a **strong research record**, demonstrated ability to conduct independent and collaborative research, and a commitment to pursuing innovative lines of investigation at the forefront of experimental physics.

Application materials:

- Curriculum Vitae (including publication list)
- Brief statement of research interests
- Two letters of recommendation to be sent directly to the selection committee

Deadline for submitting applications: November 30th

Submititons: IFIC-Physics-POSTDOCTORAL [#30794]
