

Dear Colleagues,

The energy frontier division at Fermilab is encouraging outstanding graduate students to apply for the Fermilab Lederman Fellowship by the application deadline of November 4:

<https://academicjobsonline.org/ajo/jobs/32904>

Please note the above advertisement states, that in addition to the possibility of a Lederman Fellowship position working on CMS,

"Candidates not selected for the Lederman Fellowship may be considered for other Research Associate opportunities at Fermilab".

These opportunities include research associate positions, working on the CMS experiment, that we offer through this application process only.

The broad physics program and innovative technical research of the Fermilab CMS group are discussed at <https://cms.fnal.gov/>.

Successful candidates will conduct research on the CMS experiment at the LHC, including analysis and publication of the collider data, and technical research on either the high granularity calorimeter, artificial intelligence, software and computing, MIP timing detector, outer tracker, or trigger, with the possibility to participate in research on proposed future colliders and their experiments.

Best Regards,

Robert Harris, Chair of CMS Postdoc Hiring Committee at Fermilab
